

Base Formulation for Multidose Powder

The formulation is a powder mixture of different ingredients to generate a smooth liquid formulation when getting in contact with water. **VIVASTAR® CS 200 Glucose** is used as a water-soluble filler and binder, which easily disperse when water is added. **VIVASTAR® CS 3005 XV** helps the powder to generate the gel, as it is a thickener, which is easy and quick to disperse.

Product Name	INCI	%
VIVASTAR® CS 200 Glucose	Glucose	37.0
Amisoft® MS-11	Sodium Myristoyl Glutamate	24.7
Jordapon® SCI Powder	Sodium Cocoyl Isethionate	18.5
Glycerine	Glycerin	9.9

Formulated by JRS

Process

Mix all powder ingredients together until it is homogenously mixed.

Customer Instruction

Add 4g of the Multidose Powder made by JRS to 50ml of tap water in a closed container.

Shake the mixture for at least 20 seconds.

The formulation has now increased its volume up to 200 ml.
